## Microsoft SharePoint Solutions

Implementing SharePoint since 2003 and delivering Microsoft solutions since 1997, we have the experience you need to get your SharePoint initiative up and running rapidly with a solid foundation.

We install, configure & customize MOSS 2007 in your environment, lead you through the new features of SharePoint, and provide you with a process to assess the technology against your business and technology criteria.

### MOSS 2007 Components

### Our Services

ObjectWin helps companies across industries and sizes with a myriad of services to achieve their business objectives including:

- Analysis of project requirements and goals
- Best practices to maximize the value of MOSS 2007 features and minimize custom development
- Project design, implementation, deployment and cross-training using MOSS 2007 solutions
- MOSS 2007 capabilities: Portals, Enterprise Search, Workflow, Compliance, Content Management
- Migration from SharePoint Portal Server 2003 to SharePoint Server 2007

### Team

- More than 100 Certified consultants in Microsoft technologies.
- Experts in implementing various Microsoft technologies including .NET Framework, CRM, SharePoint, Windows SharePoint Services, Business Intelligence and SQL Server.
- Excellent track record of implementing large, complex custom application development, integration and enterprise portals.
- Best of the breed professionals enabling our customers to connect people, technology and processes, and to improve efficiency and save cost.

## SharePoint Implementation Process

### Evaluation

- ObjectWin will review and understand the current business processes and usability requirements
- Match the requirements against the MOSS 2007 capabilities
- Review overall impact of SharePoint implementation on the existing system
- Report the benefits of adoption, cost involved, dependencies and identified risks (if any)

### Planning

- Conduct detailed requirements analysis- content workshops, business user interviews, IT interviews
- Conduct performance and capacity planning, security planning and maintenance planning
- Identify the level of customization required

### Installation

Based on the performance and capacity planning, we will recommend the hardware requirements and one of the following server farm topology:

- Small Server Farm
- Medium Server Farm
- Large Server Farm

### Configuration & Customization

- Portal Design, Web Content Management, Branding and Usability Design
- Mapping organization structure to SharePoint
- Development of custom Web parts using .NET technologies and SharePoint Object Model
- Creation of custom Workflows
- Configuring user profiles, audiences
- Role-based Security design
- Defining Search scope & criteria
- Configuring Business Data Catalog
- Creation of Reports and Key Performance Indicators
- Using InfoPath for creating business forms and then integrating with SharePoint
- Creation of Features, Solutions, and Site Definitions
- Configuring alternate authentication providers
- Extranet, External sites configuration

### Deployment

- Rollout of a limited production pilot (LPP)
- Convert content to the solution in accordance with the content conversion strategy deliverable

### Deliverables

- Analysis & Design: Collaborative Design Sessions, Site Diagram, Requirements Document & Design
- Implementation: Site Setup, Site Review, Site Revisions
- Training & Deployment: Train-the-Trainer Session, User Training Session, User Manual

### Knowledge Transfer

- Technical Training
  - Discuss backup strategy with IT Staff
  - Applying Permissions
- User Training
  - Demonstrate the developed portal site
  - How to manage site content
  - Demonstrate Search

### Post Implementation: Evaluation

- After a month of using SharePoint, we will facilitate a close-down meeting which will help you evaluate how this installation of SharePoint has benefited your organization.
