

WinShore Delivery Model

Introduction

ObjectWin's WinShore Delivery Model enables its customers to leverage varied locations across the globe that provide optimized value for every component of delivery. Whether it is procuring the best skills, covering 24x7 service spread, lower cost of ownership or leveraging domain expertise, the WinShore Delivery Model ensures that each of these objectives are met. The model is customized for every project and objective such as project cost, criticality and level of expertise are determined in advance. Based on this, we evaluate client location (On-site), ObjectWin development center in Houston (Off-site) and ObjectWin development center in Bangalore (Offshore) to determine which location would provide the best value in terms of cost, skills availability, service coverage, efficiency and quality of deliverables and move the delivery to a location that provides the best fit.

Advantages

- Reduced Cost of Ownership
- Ready availability of resources and flexibility of deployment
- Risk-free your critical operations & services
- Improved time to market
- Leverage World Class

Services Portfolio

- **Application Management Services:** range from custom development and web-based applications to application maintenance and support services.
