

As an SAP Services partner, ObjectWin can tap into resources that help grow and maximize business results by wide-ranging access to proven business solutions, cost-effective installation and implementations that accelerate ROI, and complete life-cycle support to lower total cost of ownership and further increase customer satisfaction. As a result, ObjectWin will increase business opportunities, develop new skills and capabilities, access information and knowledge, and engage more effectively with SAP to better serve customers.

SAP Upgrade Assessment

SAP upgrades are of three categories -- technical, functional and strategic. Technical involves just upgrading the SAP technology, functional takes it a step further to take advantage of new features, and strategic involves upgrading other aspects of the business, including business processes

ObjectWin offers an Upgrade Assessment program to address issues like - What kind of resources would an upgrade require? How can I minimize disruption and risk? Should I be looking into new functionality? How could this affect my business? If your organization is considering an upgrade, these are just a few of the questions that you would like to get answers on.

Our Upgrade Assessment and diagnostic process

- **Cost Benefit** – analysis of applicable new functionality for your users and the potential benefits and cost of upgrading
- **Upgrade Planning** – customizations and the complexity of your current application will be analyzed. ObjectWin will then tailor a project plan to meet your unique constraints
- **Architecture Assessment** – newer versions place more emphasis on backend servers. ObjectWin will assess the current architecture and provide suggestions for an optimal architecture to support the newer version
- **Upgrade Roadmap** – the roadmap to upgrade is unique for each customer and provides a recommended approach for moving forward. The roadmap will be accompanied by a proposal from ObjectWin to support you throughout the upgrade process.

What is the Output of the Upgrade Assessment?

The key deliverable of the Assessment will be a document addressing the topics above and will include a set of requirements necessary to move forward with an upgrade, an action plan and business justification for the investment. In addition we will work with your team to provide a presentation to your key stake holders on the findings of the assessment that covers:

- Sizing of development objects
- Identification of critical development objects based on availability of active production logs
- Upgrade analysis of development objects
- Landscape synchronization of objects based on transport import in relevant box
- Sizing of the functional transaction usage based on availability of active production logs
- Functional transaction delta compared to new release
- Sizing of SAP modified objects
- Sizing of authorization objects, active and inactive profiles based on transport import in relevant box
- Category Based report for Impact analysis
- Category Based report for Impact analysis
- Complexity report for Impact analysis
- Effort estimation for Impact analysis
- Estimated technical upgrade roadmap with resource plan and cost.

About ObjectWin

Headquartered in Houston, Texas, ObjectWin Technology, Inc. offers systems integration and IT solutions, with an emphasis in ERP, CRM and web technologies. ObjectWin provides software services to a diversified client base, spanning a range of businesses including Global 2000 companies. We provide global delivery services on a project and strategic consulting tailored to meet a client's specific needs. ObjectWin leverages technical expertise and time-tested delivery methodologies to provide competitive solutions to the IT marketplace.

Benefits of the Upgrade Assessment approach

Customers often approach an upgrade as a purely technical task and do not perform the necessary analysis or preparation to ensure a successful upgrade. From our experience we find that many customers maintain unnecessary customizations and do not take advantage of valuable new features or enhanced functionality.

The Upgrade Assessment places these variables on the table where management can make informed and educated decisions on the most appropriate approach.

Our Methodology

- Upgrade Assessment
- Project management (detailed project plan for entire project lifecycle)
- Technical upgrade
- Process analysis and functional transition
- Functional adaptation of custom developments
- Unit and integration testing
- Documentation of changes
- Training of key users
- Support after “go live” date

Assessment Investment

From our participation in multiple projects, we understand that application upgrade complexity is driven by the degree of customization. We have developed three (3) fixed priced assessments to fit your requirements

▪ Technical Assessment

- Resources: 3 consultants, 4 weeks
- Work Performed: analysis of repository, customizations and technical impact of the upgrade
- **Fixed Price Solution: Contact our Sales Team**

▪ Functional Assessment

- Resources: 4 consultants, 4 weeks
- Work Performed: customizations reviewed, redesigned and streamlined based on new application functionality.
- **Fixed Price Solution: Contact our Sales Team**

▪ Complete Assessment

- Resources: 5 consultants, 5 weeks
- Work Performed: the Technical and Functional assessment work described above plus an assessment of the hardware and software required with the necessary changes and roadmap for implementation identified.
- **Fixed Price Solution: Contact our Sales Team**
